JOB DISCOVERY / REVIEWED OUTREACH

Orbit

Collect job leads, prepare application material and review drafts in a conversational workspace.

QUICK START

Open: Invitation-only hosted preview

Run locally:

```
npm install
npm start
```

Next: Open the local URL printed at startup (http://127.0.0.1:8765)

YOUR FIRST SESSION

01 Use the hosted preview only with an invitation. For local use, install Node.js 24+, configure the documented environment, then start the server.

02 Choose local Ollama or a configured provider. See LOCAL_AI.md for local model setup.

03 Describe the role or search. Review each listing and its evidence; edit your profile before asking Orbit to prepare application material.

04 Connect Gmail only after reviewing SECURITY.md and the privacy notice. Gmail requires a Google OAuth client and your explicit mailbox authorization.

05 Review the exact recipient, subject, message and attachments for every outreach. Keep it as a draft or approve only after checking its contents.

06 Use reply tracking and export to organize the search.

DATA AND PRIVACY

Application materials and connected account details are private workspace data. The hosted operator controls storage. Read SECURITY.md and deployment notes before connecting real accounts.

LIMITS TO KEEP IN MIND

The hosted preview requires an invitation. Mocked tests do not verify a live AI and Gmail send/reply cycle. Check all generated listings and drafts.
